## Gunsmithing

Gunsmithing is an exciting trade that can turn out a lucrative career. Gunsmiths are highly sought by firearm manufacturers and individuals for their vast knowledge of gun design and maintenance. They possess a wide range of skills in the art of designing, building and repairing all types, including hunting rifles, machine guns and others. Before entering the trade, it is important to learn gunsmithing, it is important that they understand all of their duties and what is expected of them. Gunsmiths are responsible for designing, building, modifying, reworking and repair of all firearms. They may be engaged in various work, such as metal working and welding. The duties of gunsmiths vary by region and employer. They are employed by manufacturers, military and law-enforcement agencies, gun shops and sporting goods stores. Because the general duties of gunsmiths are so broad, they must have a wide range of skills, including all of the following: - Metalworking - Welding - Porting - Machining - Chasing

2015 Reprint of the 1944 edition. Full facsimile of the original edition, not reproduced with Optical Recognition Software. Still a classic work on gunsmithing, Vickery's "Advanced Gunsmithing" provides extended and detailed explanations on different gunsmithing tools, gun parts, and methods. Vickery's passion for tools, and the firearms he could manipulate with them, gives this book its spirit of resourcefulness and experimentation. Most aspects of gunsmithing are treated in detail in the book's twenty chapters, including; barreling, chambering, action, and other kinds of metal-working. The book is amply illustrated, with all photos reproduced in exacting detail.

This scarce antiquarian book is a facsimile reprint of the original. Due to its age, it may contain imperfections such as marks, notations, marginalia and flawed pages. Because we believe this work is culturally important, we have made it available as part of our commitment for protecting, preserving, and promoting the world's literature in affordable, high quality, modern editions that are true to the original work.

## Gunsmithing

Gunsmiths build, repair, and tune firearms like handguns, rifles, and shotguns. They can perform tasks like disassembling, cleaning, and reassembling a gun, but they can also do more complex work like refinishing metal, engraving designs on wood and metal, and designing custom firearms. These tasks require gunsmiths to have a variety of skills. Gunsmiths must be knowledgeable about different types of firearms and their parts to diagnose and modify them to improve performance. Working with metal and wood requires knowledge of chemistry. Gunsmiths must know how to read blueprints, and they work with computer-aided design software as well. Gunsmiths must also know how to weld, rivet, and work with tools like lathes and mills.

## Advanced Gunsmithing

Master gun maker Bill Holmes shares what will and won't work in designing and building rifles and shotguns from raw materials. Includes the fine points of creating everything from actions to sights, as well as tips on tools, materials, assembly, finishing and more. For academic study only.

## Advanced Gunsmithing

This book focuses on developing small weapons, following the lifecycle of a firearm from design to manufacture. It demonstrates how modern technologies can be used at every stage of the process, such as design methodologies, CAD/CAE/CAM software, rapid prototyping, test benches, materials, heat and surface treatments, and manufacturing processes. Several case studies are presented to provide detailed considerations on developing specific topics. Small weapons are designed to be carried by one person; examples are pistols, revolvers, rifles, carbines, shotguns, and submachine guns. Beginning with a review of the history of weapons from ancient to modern times, this book builds on this by mapping out recent innovations and state-of-the-art technologies that have advanced small weapon design. Presenting a comprehensive guide to computer design tools used by weapon engineers, this book demonstrates the capabilities of modern software at all stages of the process, looking at the computer-aided design, engineering, and manufacturing. It also details the materials used to create small weapons, notably steels, engineering polymers, composites, and emerging materials. Manufacturing processes, both conventional and unconventional, are discussed, for example, casting, powder metallurgy, additive manufacturing, and heat and surface treatments. This book is essential reading to those in the field of weapons, such as designers, workers in research and development, engineering and design students, students at military colleges, sportsmen, hunters, and those interested in firearms. Dr. Jose Martin Herrera-Ramirez is a military engineer with experience in the field of weapon and ammunition development. After receiving his PhD in Materials Science and Engineering from the Paris School of Mines in France, he was the head of the Applied Research Center and Technology Development for the Mexican Military Industry (CIADTIM). He now researches the development of metallic alloys and composites at the Research Center for Advanced Materials (CIMAV) in Chihuahua, Mexico. Dr. Luis Adrian Zuñiga-Aviles is a military engineer with wide experience in the field of weapon and ammunition development. He was head of the prototypes and simulation departments at the Applied Research Center and Technology Development for the Mexican Military Industry (CIADTIM) and head of engineering of the Production directorate. He received his PhD in Science and Technology on Mechatronics from the Center for Engineering and Industrial Development (CIDESI) in Queretaro, Mexico.

He now researches the new product design and development for military application, machinery, robotics, and medical devices in the Faculty of Medicine at the Autonomous University of Mexico State (UAEMex) and the Faculty of Engineering at UAEMex as part of the Researchers for Mexico program CONACYT.
